Selecting the Right Screen

Select the Right Size for the Audience

When choosing a screen size, there are many important factors including room dimensions, audience size and arrangement. It is important to fit the screen to the audience — not to the projector. Da-Lite recommends the following formula for determining screen size:

\[
\text{Screen Width} = \frac{\text{Room Depth}}{2}
\]

- **For 16:9 and 16:10 Formats**: An easy way to determine screen size is to take the depth of the room and divide by two. This will equal the approximate diagonal of viewing area for your audience in 16:9 or 16:10 format.

\[
\text{Screen Height} = \frac{\text{Room Depth}}{6}
\]

- **For 4:3 Formats**: Another way to calculate the size of screen would be to divide the depth of the room by 6, which would equal the height of the screen in 4:3 format.

- Ideally, the first row of seats should be approximately 2 screen heights away.

- The bottom of the screen should be a minimum of 3–4 feet above the audience floor, allowing those seated toward the rear of the audience to see the screen. This may require additional screen drop.

Select the Format

Select the appropriate format for your projection application. Common formats are as follows:

Select the Best Surface for Your Image

Choose the screen surface that best suits your projection and viewing requirements. If the screen will be used for multiple projection methods, choose the screen surface that meets the requirements of the lesser performing projection method. For example, if using a 1,500 lumen projector and a 2,500 lumen projector, choose the screen surface for the 1,500 lumen projector. For your convenience, the following pages provide descriptions and performance characteristics for each front and rear screen surface.
# How to Calculate a Custom Screen Size

Use the following formulas to calculate a custom size. These formulas will assist you in finding the viewing area only.

## Screen Borders and Drop

Black masking borders are standard on Da-Lite front projection screens at no extra charge. Borders enhance the perceived brightness of an image on a screen. The human eye perceives the image to have more contrast and a sharper picture with brighter colors. Borders also allow the projected image to “bleed-off” the screen for professional appearing presentations.

Drop is available on most Da-Lite wall, ceiling and electric screens. Drop is the term used for extra fabric added to the top or bottom of the screen to adjust the screen surface to within normal viewing heights. Drop can be specified in either black or white.
Front Projection Screen Surfaces

All Da-Lite Front Projection Screen Surfaces have achieved GREENGUARD GOLD Certification. All Da-Lite surfaces can be cleaned with mild soap and water, are flame retardent and mildew resistant.

**DA-230**
Gain: 2.3  Half Angle: 25º  Viewing Cone: 50º
A neutral gray coating with high gain and a moderate viewing angle. The increased gain of this surface makes it suitable for environments where ambient light is uncontrollable and a projector with moderate light output is utilized. **Light Baffles**

- Light baffles are ideal for use with a multiple screen application contained in a single frame.
- Choose the Zero Gap Light Baffle in an edge-to-edge image application. The “wedge” shape allows the projected images to match seamlessly with virtually no visible gap between the screen panels and prevents light from one projected image from spilling over onto the screen panel beside it. To be used with Da-Plex rigid rear projection screens ⅜” thick up to 60” high or ⅝” thick up to 84” high.
- Choose the T-Mullion Light Baffle in an application where separate images are being projected on each screen panel and a small amount of space between each image is desired. The T-Mullion is 1½” wide and features a flat black finish. To be used with rigid rear projection screens up to 60” high.

<td>Zero Gap Light Baffle</td>

<tr>

</tr>
</tbody>
</table>

- Light baffles are priced per linear foot of viewing area height. To calculate the number of baffles needed for a multiple screen application order one less light baffle than the number of screens in the application.
- Example: A three screen application using 60” x 80” screen panels will require two light baffles.

2 light baffles x 60” screen height =120” or 10’

The light baffle cost for Zero Gap is $156.00 Retail, linear foot x 10’ = $1,560.00 Retail This is in addition to the screen and frame cost.
