**Press Function**

1. **Green Laser Output** — This is the source of the laser beam.
2. **LED Indicator**
3. **Next Button** — This works exactly like the forward to the next page of Microsoft Power Point.
4. **Back Button** — This works exactly like the return to the previous page of Microsoft Power Point.
5. **Green Laser Button** — This is a push button for the laser beam.
6. **USB Connector** — The USB connector plugs into any available USB port.
7. **Indicator Button** — Light indicates when wireless receiver is connected to the computer.
8. **Pairing Button** — To connect with wireless receiver
9. **Battery Compartment**

---

**Quick Start Guide**

1. **Insert Battery** — Remove the battery cover carefully and insert battery.
2. **Insert Receiver** — Insert the Wireless Receiver into any available USB port.
3. **Wait for Indicator Button to light and remain on solid.**
4. **Press the Indicator Button on the USB receiver around 3 seconds and release. The light will start flashing slowly.**
5. **Press the Pairing Button. The Wireless Receiver Indicator light will flash rapidly and then remain on solid. The remote is now paired with the receiver and ready to use.**

**Note**

Please avoid touching the pairing button when you use RF Presenter. If the pairing button is pressed steps 3 and 4 will need to be repeated.

The Up and Down buttons and the remote correspond to the Page Up and Page Down button on your computer keyboard. Your PowerPoint presentation must be in Slide Show mode in order for the remote to function.
