Important Safety Instructions

⚠️ WARNING: A WARNING alerts you to the possibility of serious injury or death if you do not follow the instructions.

⚠️ CAUTION: A CAUTION alerts you to the possibility of damage or destruction of equipment if you do not follow the corresponding instructions.

⚠️ WARNING: Failure to read, thoroughly understand, and follow all instructions can result in serious personal injury, damage to equipment, or voiding of factory warranty! It is the installer’s responsibility to make sure all components are properly assembled and installed using the instructions provided.

⚠️ WARNING: Exceeding the weight capacity can result in serious personal injury or damage to equipment! It is the installer’s responsibility to make sure the weight of all components does not exceed 140 lbs. (63.50 kg) or 70 lbs (31.75 kg) per bracket.

⚠️ WARNING: Use this mounting system only for its intended use as described in these instructions. Do not use attachments not recommended by the manufacturer.

⚠️ WARNING: Never mount these brackets if they are damaged. Return the brackets for replacement.

⚠️ WARNING: Do not use this product outdoors.

IMPORTANT NOTE: The No. 6 wall brackets are designed to be mounted to an 8” bare concrete wall, 8” x 8” x 16” bare concrete block wall, or a 2” x 4” wood studs (16” on center) wall covered by drywall with a maximum thickness of 5/8”.

Save These Instructions
Tools Required for Installation

- Pliers
- Tape Measure
- 3/16" (wood) 5/16" (concrete)
- 7/16" Socket (wood)
- #2 Phillips Screwdriver (concrete)
- 4 ft. Level

Parts

- (2) Metal Wall Brackets
- (2) 5/16" - 18 Open Eye Bolts
- (2) 5/16" - 18 Nylon Locking Hex Nuts
- (2) 5/16" - 18 Hex Nuts
- (2) "S" Hooks
The No. 6 wall brackets are designed to be mounted an 8’ bare concrete block wall, 8’ x 8’ x 16’ bare concrete block wall, or a 2’ x 4’ wood studs (16’ on center) wall covered by drywall with a maximum thickness of 5/8’.

**Locate Mounting Site**

**WARNING: IMPROPER INSTALLATION CAN LEAD TO SCREEN FALLING CAUSING SEVERE PERSONAL INJURY OR DAMAGE TO EQUIPMENT!** It is the installer’s responsibility to make sure the weight of all components does not exceed 140 lbs. (63.50 kg) or 70 lbs. (31.75 kg) per bracket.

Proceed to either the Installing to a Wood Stud Wall section or the Installing to a Concrete Wall section.

---

### Installing to a Wood Stud Wall

**NOTE:** Depending on the overall length of your screen case, it may not be able to be mounted to a stud wall. Each end of the screen case must be within 1’ of the center of a wall stud in order to properly hang from the wall bracket.

1. Determine how far up the wall to hang screen.
2. Mark wall for center of screen housing.
3. Measure up 2’ (50.80mm) from the first mark and make a second mark.
4. Locate the (2) wall studs closest to the ends of the case. (See Figure 1).
5. Using a level, mark the wall on each stud using the second mark from Step 3.

**WARNING: ELECTRICAL SHOCK HAZARD! CUTTING OR DRILLING INTO ELECTRICAL CORDS OR CABLES CAN CAUSE DEATH OR SERIOUS PERSONAL INJURY!** Always make certain area behind mounting surface is free of electrical wires and cables before drilling or installing fasteners.

---

### Installing to a Concrete Wall

1. Drill one 3/16” (4.8mm) pilot hole at each wall stud marking.
2. Using one 1/4” x 1-1/2” lag bolt (not provided) and 1/4” flat washer (not provided) attach bracket to wall using top mounting hole. (See Figure 2)

**IMPORTANT NOTE:** Lag bolt must be secured into a wall stud.

3. Drill one 3/16” (4.8mm) hole through bottom bracket hole.
4. Using one 1/4” x 1-1/2” lag bolt (not provided) and 1/4” flat washer (not provided) fasten through bottom hole of bracket (See Figure 3)

**IMPORTANT NOTE:** Lag bolt must be secured into a wall stud.

5. Repeat steps 6-9 for second bracket.
Installing to a Concrete Wall

1. Determine how far up the wall to hang screen.
2. Mark wall for center of screen housing.
3. Measure up 2” (50.80mm) from the marking and make a mark.
4. Measure the overall length of your screen case and divide by two. This will give you the distance from your center mark to each bracket. Drill a 1/2” hole through hollow part of cinder block. (See Figure 4)

   **IMPORTANT NOTE:** If the holes are not going to fall on the hollow portion of the cinder block, the screen position will need adjusted.

5. Measure down 3-1/2” (88.90mm) from previous drilled hole and drill another 1/2” hole. (See Figure 4)
6. Insert two 1/4-20 Snap Togglers (not supplied) into concrete wall. (See Figure 4)
7. Using two 1/4-20 x 2” long machine screws (not provided) and 1/4” flat washers (not provided) attach bracket to wall using top and bottom mounting holes. (See Figure 5)
8. Repeat steps 4-7 for second bracket.
1. Thread hex nut onto 5/16” open eye bolt half way down thread. (See Figure 6)

2. Insert open eye bolt through top hole of metal bracket. Tighten down nylon locking nut on top of bracket. (See Figure 7)

   **IMPORTANT NOTE:** Open eye bolt should always face forward.

3. Install "S" hooks to screen mounting brackets. Hook through bracket and crimp closed both ends of "S" hook. (See Figure 8)

   **IMPORTANT NOTE:** "S" hooks are intended for one time use only. Do not open and re-crimp "S" hooks.

   **WARNING:** IMPROPER INSTALLATION CAN LEAD TO SCREEN FALLING CAUSING SEVERE PERSONAL INJURY OR DAMAGE TO EQUIPMENT! It is the installer's responsibility to make sure the weight of all components does not exceed 140 lbs. (63.50 kg) or 70 lbs (31.75 kg) per bracket.

4. Hang screen by looping "S" hook into the open eye bolt. (See Figure 9)
