Important Safety Instructions

When using your video equipment, basic safety precautions should always be followed, including the following:

1. Read and understand all instructions before using.

2. Failure to provide adequate structural strength for this component can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the structure to which this component is attached can support the weight of all equipment. Reinforce the structure as required before installing the component.

3. Use this projection screen only for its intended use as described in these instructions. Do not use attachments not recommended by the manufacturer.

Frame Assembly

You will need a 9/16” wrench to assemble your Series 200/300 lace and grommet frame. If you have a split frame, you will also need a 3/16” allen wrench. Before beginning assembly make sure the work surface is clear of objects or debris that could scratch the frame or puncture the viewing surface. Use the wrapping material to lay the frame sections on to keep from scratching the frame.

1. Unwrap the frame sections and orient them as shown in the Figure below. Note that the ends are color coded. Make sure the colors match at each corner. If your frame has the optional Pro-Trim masked borders, lay the frame with the borders facing down. Be sure to lay the frame on the wrapping material to keep the Pro-Trim clean.

2. If your frame has two-piece top and bottom frame sections, match the color codes on the ends of the tubes. See split frame assembly on page 4. When top and bottom sections are assembled the corners should lay flat to assure that the unit does not twist or bow.

3. Slide the side frame sections onto the top frame section. Insert one 3/8” bolt at each corner and tighten (do not over-tighten).

4. The next step is much easier with two people. With one person at each end, slide the bottom frame section into the side frame sections. Make sure each side slides evenly to avoid binding. Insert one 3/8” bolt at each corner and tighten (do not over-tighten).

5. Frame assembly is complete. Next, unwrap the viewing surface (sold separately) and lay it face down inside the frame assembly.

6. The viewing side of the surface is wrapped to the inside of the roll so you will have to unroll the surface and then turn it over. Be sure to lay the surface on the wrapping material to keep it clean.

7. Start at one side of the frame and locate the center of the viewing surface and frame. The center of the screen surface can be identified by a bright colored grommet on each of the four sides. The center of the frame is marked by a piece of colored tape. Starting at the center, begin attaching the hooks on the frame into the grommets holes in the screen surface. When you get to one end, the grommet in the corner of the viewing surface should be attached to the s-hook in the corner of the frame.
The Series 200 frame is supplied with eyebolts for ceiling installations and hanger brackets for wall mount installations.

**Ceiling Installation:** The frame is predrilled for the attachment of the eyebolts. There are 3 eyebolts for smaller frames with a one-piece top frame rail. Larger frames with two-piece top frame rails will have 4 eyebolts. Insert the eyebolts through the frame and attach the hex nut to the eyebolt.

**Wall Mount Installation:** There are 6 hanger brackets for smaller frames with a one-piece top frame rail. 8 hanger brackets are provided for larger frames with two-piece top frame rails. Determine where the Series 200 frame will be mounted on the wall. Consider the following before attaching the hanger brackets to the wall.

- The hanger brackets must be anchored to a supported section of the wall, such as a wall stud.
- The hanger brackets should be spaced on the wall so they line up with the S-hooks on the frame. This will prevent the lace cord from being pinched between the frame and hanger.
- You will need at least 2" above the hanger bracket to mount the Series 200 frame (see Figure 2).
- Frames with one-piece top frame rails should be supported at the center of the frame and about 2-4 feet from each end of the frame.
- Frames with two-piece top frame rails should be supported about 2-3 feet on each side of the center joint and about 2-4 feet from each end of the frame.

1. Attach 3 or 4 hanger brackets (as required above) at the same height along the wall. To determine the distance between the upper and lower hanger brackets you must measure the overall height of the frame. If your frame has the Pro-Trim border subtract 3 3/4" from the overall height. If your frame does not have the Pro-Trim border subtract 3 1/2" from the overall height. Using this number, measure down from each hanger bracket and mark the wall.

2. Line up the lower hanger bracket with the mark and secure it to the wall. Refer to Figure 2.

3. Remove the frame clamp from the hanger brackets and position the Series 200 frame on the hanger brackets as shown in Figure 2.

4. Place the frame clamp onto the hanger bracket and secure it with the supplied hex nut.
Series 300 Installation

The Series 300 frame is supplied with eyebolts for ceiling installations and hanger brackets for wall mount installations.

**Ceiling Installation:** The frame is predrilled for the attachment of the eyebolts. There are 3 eyebolts for smaller frames with a one-piece top frame rail. Larger frames with two-piece top frame rails will have 4 eyebolts. Insert the eyebolts through the frame and attach the hex nut to the eyebolt.

**Wall Mount Installation:** There are 6 hanger brackets for smaller frames with a one-piece top frame rail. 8 hanger brackets are provided for larger frames with two-piece top frame rails. Determine where the Series 300 frame will be mounted on the wall. Consider the following before attaching the hanger brackets to the wall.

- The hanger brackets must be anchored to a supported section of the wall, such as a wall stud.
- The hanger brackets should be spaced on the wall so they line up with the S-hooks on the frame. This will prevent the lace cord from being pinched between the frame and hanger.
- You will need at least 3’ above the hanger bracket to mount the Series 300 frame (see Figure 3).
- Frames with one-piece top frame rails should be supported at the center of the frame and about 2-4 feet from each end of the frame.
- Frames with two-piece top frame rails should be supported about 2-3 feet on each side of the center joint and about 2-4 feet from each end of the frame.

1. Attach 3 or 4 hanger brackets (as required above) at the same height along the wall. To determine the distance between the upper and lower hanger brackets you must measure the overall height of the frame. If your frame has the Pro-Trim border subtract 4-3/4” from the overall height. If your frame does not have the Pro-Trim border subtract 4-1/2” from the overall height. Using this number, measure down from each hanger bracket and mark the wall.

2. Line up the lower hanger bracket with the mark and secure it to the wall. Refer to Figure 3.

3. Remove the frame clamp from the hanger brackets and position the Series 300 frame on the hanger brackets as shown in Figure 3.

4. Place the frame clamp onto the hanger bracket and secure it with the supplied hex nut.
1. Loosely tighten set screw so that pieces will still move freely. See Figure 4.
2. Slide tube over connector and line up hole. See Figure 5.
3. Insert second set screw and tighten all the way until tube is secure. See Figure 6.
4. Tighten first set screw the rest of the way. See Figure 6.
5. Finished joint should look like Figure 7.
LIMITED FIVE YEAR WARRANTY ON DA-LITE PRESENTATION PRODUCTS

Milestone AV Technologies LLC warrants certain Da-Lite branded products to the original purchaser only, to be free from defects in materials and workmanship for a period of five (5) years from the date of purchase by the original purchaser; provided they are properly operated according to Da-Lite’s instructions and are not damaged due to improper handling or treatment after shipment from the factory.

This warranty does not apply to equipment showing evidence of misuse, abuse or accidental damage, or which has been tampered with or repaired by a person other than authorized Da-Lite personnel.

Da-Lite’s sole obligation under this warranty shall be to repair or to replace (at Da-Lite’s option) the defective part of the merchandise. Returns for service should be made to your Da-Lite dealer. If it is necessary for the dealer to return the screen or part to Da-Lite, transportation expenses to and from Da-Lite are payable by the purchaser and Da-Lite is not responsible for damage in shipment. To protect yourself against damage or loss in transit, insure the product and prepay all transportation expenses.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES AS TO FITNESS FOR USE AND MERCHANTABILITY. Any implied warranties of fitness for use, or merchantability, that may be mandated by statute or rule of law are limited to the five (5) year warranty period. This warranty gives you specific legal rights, and you may also have other rights, which vary from state-to-state. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, NO LIABILITY IS ASSUMED FOR EXPENSES OR DAMAGES RESULTING FROM INTERRUPTION IN OPERATION OF EQUIPMENT, OR FOR INCIDENTAL, DIRECT, OR CONSEQUENTIAL DAMAGES OF ANY NATURE.

In the event that there is a defect in materials or workmanship of a Da-Lite product, you may contact our Customer Care Specialists at 3100 North Detroit Street, Warsaw, IN 46582, (574) 267-8101, (800) 622-3737.

IMPORTANT: THIS WARRANTY SHALL NOT BE VALID AND DA-LITE BRANDED PRODUCTS SHALL NOT BE BOUND BY THIS WARRANTY IF THE PRODUCT IS NOT OPERATED IN ACCORDANCE WITH THE DA-LITE WRITTEN INSTRUCTIONS.

Keep your sales receipt to prove the date of purchase and your original ownership.

Conditions for Transportation and Storage

- Temperature: Between 40 - 100°F (5 - 40°C)
- Relative Humidity: 30% to 70%, non-condensing
- Always keep the projection screen horizontal during transport and storage
- Make sure the entire package is supported when stored
- Do not stack more than six projection screens on top of each other
- Make sure the heaviest package is placed at the bottom of the stack

Screen surface should be allowed to air out once every two months, or otherwise used on a regular basis, if the temperature is above 72°F (22°C) and at least once every month if the temperature goes above 85°F (30°C).
